There has been no contact this month: ☐

Part A: To be completed by the PGR prior to the supervision meeting

Progress since last monthly report, plus possible future work (if appropriate) and areas you would like to discuss:

No significant progress to report. At the last meeting supervisors were provided with an updated copy of the thesis to review. The plan was for them to provide feedback at the upcoming meeting in September. Going forward I will action any changes that need to be made or any additional work that needs to be done. I will also begin work on drafting the introduction and conclusion sections. Depending on how much work is required for the ETP chapter I will also begin formatting that chapter into a paper.

Part B: To be completed by the supervisor during or immediately after the meeting

Comments on discussion at the supervisory meeting, outcomes and future work:

Entering a comment for all contact types is mandatory.

Supervisors gave feedback on Chapters 4 and 5.

Supervisors agreed that Chapter 4 was a good PhD chapter and contained some important research. They gave verbal comments on this chapter which included some discussion as to: whether OCs for the TITE-CRM example should be included; the format of some of the tables; some points of clarification. Supervisors agreed to send Amit their specific comments for him to consider and make final amendments to Chapter 4 as he thought necessary.

Supervisors agreed that Chapter 5 needed some remodelling to tell a better story and have more specific PhD level research questions and that it should focus more on the element that Amit has particularly contributed which is the development of the App. It was agreed that some of the more initial basic concepts currently included could go into Chapter 1 as an introduction. Cindy agreed to work with Amit to remodel the chapter and then an updated version would be shared with Kristian for review.

Publication of the Chapter 4 work was discussed - it was felt that this should probably be submitted to a methodology journal rather than clinical one.

There was some discussion about whether the thesis contained sufficient material and it was decided that no further research was needed and when Amit writes the Introduction and Discussion it would enable clarity on the whole research story that the thesis addresses and would pull all the research work together into a cohesive thesis.
